

Frontend Specification Document (FSD)

System Documentation | IRVision AI

1. Layout Design & Aesthetics

The frontend follows modern dark-mode aesthetic guidelines tailored for satellite telemetry screens:

- **Primary Background:** Deep space blue/black gradient (#070715 to #0f0f2d).
- **Accent Highlights:** Vibrant purple glow (#8b5cf6) and sleek cyan-blue borders (#0ea5e9).
- **Typography:** System-wide integration of 'Inter' sans-serif and display 'Outfit' fonts via Google Fonts api.

2. Application Routing and Views

Path Route	Page Component	Key Interactive Features
/	LandingPage	Interactive hero banner, feature highlight list, animated launch action.
/login	LoginPage	Credentials email/password validation, direct Google SSO link, forgot password router.
/forgot-password	ForgotPasswordPage	Stateful recovery steps (Step 1: request OTP, Step 2: enter OTP & password).
/upload	UploadPage	Drag-and-drop dropzone, live progress upload bar, pipeline active checklist.
/result	ResultPage	Comparison slider, split screen zoom magnifier, triple grid, metadata card, PDF print.
/history	HistoryPage	Inspection log table, search filter input, delete trigger modal.

3. State Management & API Client

Axios client interceptors dynamically resolve the API host depending on the current browser URL. Real-time file processing progress uses native EventSource/Fetch reader to parse Server-Sent Events (SSE) stream objects ('data: { progress: X, message: Y }') and feed the React progress bar state.
