

Privacy Policy Document

System Documentation | IRVision AI

1. Information We Collect

We collect minimal personal data necessary to provide secure accounts and maintain your image processing history:

- **Account Information:** Name, email address, and encrypted password credentials (or Google OAuth profile tokens).
- **Uploaded Media:** Grayscale/thermal infrared satellite images uploaded for colorization and upscaling.
- **Log Data:** IP address, browser type, processing duration, and output resolution metadata.

2. How We Use Information

Collected details are used exclusively to secure user sessions, maintain the historical database, and prevent server abuses. We do not sell, trade, or distribute your email or satellite data to third-party marketing companies.

3. Data Retention & Security

Account and image data are stored in secure cloud nodes. Passwords are encrypted using Bcrypt. If a user deletes an entry from their history log, the associated static files are immediately removed from storage, conserving data footprint.

4. Cookies

We do not use tracking cookies. Temporary local storage values are utilized only to hold the active JWT authorization token.
