

Data Compliance Document

System Documentation | IRVision AI

1. Data Residency & GDPR Alignment

IRVision AI aligns with international data protection frameworks, including the General Data Protection Regulation (GDPR) and regional space agency regulations:

- **Right to Erasure:** Users can delete their data from the History tab, triggering full backend deletion of physical records and metadata.
- **Data Portability:** Users can download their processed files and generated PDF reports directly from the Result screen.

2. Remote Sensing Standards Compliance

Processed images and metadata outputs follow standard Open Geospatial Consortium (OGC) image guidelines, preserving key EXIF structures and mapping resolutions cleanly to GIS analysis tools.

3. Access Controls Audits

Audit Standard	Frequency	Responsible Layer
JWT Token Expiration Check	Every Request	FastAPI Auth Router Middleware
CORS Header Verification	Continuous	Uvicorn Gateway Handler
Database Encryption	At Rest	MongoDB Atlas Encrypted Clusters
File Size Sanitation Check	Pre-upload Phase	FastAPI Multipart Parser

4. Security Audits

All system libraries and Python dependencies are audited periodically using automated security scanners to prevent supply-chain package vulnerability risks.
